

■ accessories Seperator #1354

Product description

Diamond Seperator is used to prepare, degrease and clean surfaces to ensure optimum adhesion of metal polymers. Oils, grease and other impurities are reliably removed from meatles, plastics and other surfaces.

Characteristics

- Silicone-free
- Evaporates quickly and residue-free
- Does not attack sensitive surfaces

Chemical resistance

For questions about chemical resistance, please contact our technicians

Density	0,75
---------	------

Spray the component to be cleaned from top to bottom as far as possible with cleaner. Impurities run down. Remnants can easily be wiped off. If it is not possible to remove particularly stubborn impurities directly, sprinkle the area once more with cleaner and then wipe it off with a clean, lint-free cloth. Repeat this process until the contamination is completely removed.

Please pay attention to the instructions of the safety data sheet.
